

Antahpura Constitutional Codex v0.1

Master design document for the Antahpura project

Part I — Foundational Constitution

The Antahpura is conceived as a living imperial institution rather than a conventional palace. It integrates throne, zenana, military, administration, temple, subterranean vaults, and ritual chorus into a single constitutional organism. The narrator is the Rajya-Lekhaka, whose function is archival rather than personal.

Part II — Narrative Style & Linguistic System

Primary influences: Kalidasa, Banabhatta, Harshacarita, Ain-i-Akbari, Indo-Persian court chronicles, yogic literature, and ritual Sanskrit. Sentence rhythm alternates long ceremonial periods with short archival verdicts. Dialogue follows institutional registers rather than modern conversational logic.

Part III — Character Roster & Standardized Attributes

Current constitutional roster: Maha Deva; Princess Kuma Ree Rati; Padma; Champa; Kamini Anisa; Shrinagar; Tarana; Roxana; Jahzara; Sevda; Malika; Reva; Zola; Altani. Each character is defined by archetype, institutional allegiance, public voice, relational voice, interior voice, ritual discipline, telemetry signature, and Punyasiddhi specialization.

Part IV — Mapping System

Relationships are generated through Rank × Affection × Obligation × Audience × Institution. Authority flows from Maha Deva through the constitutional hierarchy, while instructional transmission follows the Punyasiddhi graph.

Part V — Lore Architecture

The Monitoring Plinth is the constitutional memory device of the world. It records scene state, ritual synchronization, character telemetry, and institutional continuity. It does not judge morality; it records alignment.

Part VI — Monitoring Plinth V15 Runtime

Runtime pipeline: Temple → Gathering → Scene → Authority → Participants → Protocols → Punyasiddhi → Telemetry → Archive. Default view renders only active participants; archive mode renders the full imperial registry.

Part VII — Sanskrit Protocol Engine

Core protocols: Adhikara, Sammati, Maryada, Darshana, Smarana, Manda, Virama, Shanti-Seva, and Punyasiddhi. These replace modern protocol vocabulary and function as constitutional runtime states.

Part VIII — Punyasiddhi Progression

Instruction is modeled as constitutional transmission. Progression moves through observation, curiosity, Darshana, Sammati, guided practice, internalization, independent practice, and Siddhi integration.

Part IX — Temples & Ritual Gatherings

Canonical temples: Kedara Mandapa, Matangi Sabha, Yogini Cloister, Smashana Bhairava Kunda, Raja Snana Pavilion, Chandra Pushkarini. Canonical gatherings: Mahashivaratri Royal Assembly, Vasanta Rasa Assembly, Kartika Dipotsava, Navaratri Court, Monastic Pranayama Session, Royal Darshana Procession.

Part X — Scene Architecture

Five-act structure: Spatial Consecration; Somatic Regulation; Sonic & Geometric Resonance; Metaphysical Crux; Grounding & Dissolution.

Part XI — Score Matrices

Constitutional matrices track authority, discipline, loyalty, vigilance, devotion, curiosity, restraint, transmission, breath, voice, circulation, stillness, ritual intensity, protocol compliance, temple resonance, and gathering cohesion.

Part XII — Time System & Occasions

Scenes are tagged by temple, gathering, lunar phase, time of day, ritual authority, and telemetry phase.

Part XIII — Runtime Integration

The constitution functions as the immutable source layer; the stage functions as the renderer and constitutional interpreter.

Part XIV — Master Entry Index

Current planned structure exceeds 30 entries, including world constitution, narrative constitution, style bible, fourteen character bibles, temple entries, gathering entries, Monitoring Plinth, telemetry matrices, protocol engine, Punyasiddhi engine, scene architecture, timeline system, and constitutional glossary.
